Mark Lizotte

has successfully completed the online, non-credit Specialization

Certified Information Systems Security Professional (CISSP)

The CISSP certification specialization will prepare students for the rigorous CISSP exam. Our individual courses provide in-depth coverage across all eight domains per ISC2, broken down into manageable sections a student can review at their own pace. Our instructor is an industry veteran with over 25 years of experience, both in the field and in the classroom. The courses included in this learning path are organized and taught in such a way to allow maximum retention of information. Through the use of real-world scenarios, analogies and humor, the CISSP material comes to life. An individual who completes this learning path will gain knowledge equivalent to that of a seasoned professional and should be able to implement the learned skills, delivering value to any organization.

The online specialization named in this certificate may draw on material from courses taught on-campus, but the included courses are not equivalent to on-campus courses. Participation in this online specialization does not constitute enrollment at this university. This certificate does not confer a University grade, course credit or degree, and it does not verify the identity of the learner.
